LANGUE(S) D'ENSEIGNEMENT

Anglais

CONTENU

By the end of this module, students be able to: (i) apply concepts from microeconomic theory (partial and general equilibrium theory) to investigate how trade and output specialisation evolve and how this affects welfare; (ii) Appreciate the importance of different market structures in determining the welfare consequences of trade; (iii) Interpret the relationship between trade patterns, labour markets, and wage inequality; (iv) Analyse the rationale for trade policy and its effects. The module will allow students to engage with the current issues and debates around the role of globalisation and trade policy.

Dernière modification le 21/07/2023

Course outline:

1. Introduction and gravity equation
2. Neoclassical theories of trade
3. Returns to scale and firms in the global economy
4. Trade policy

COMPÉTENCES À ACQUÉRIR

- Students will develop advanced analytical skills in order to work with theory models and interpret their empirical applications.
- The group presentations will require them to summarize and present empirical and theoretical findings from research papers as well as policy reports.

MODALITÉS D'ORGANISATION

Examens: CM grade: final exam; TD grade: Midterm test (60%), group presentations (40%), and bonus points from weekly assignments
